ConquestPlatinum

Meta-Adaptive Expert Advisor — Technical & Operating Guide

MetaTrader 5 | Version 2.50 | Prepared for institutional and professional review

1. Overview

ConquestPlatinum is a self-adjusting MetaTrader 5 Expert Advisor built around a shared signal bus and a strategy voting council. Rather than trading a single fixed rule set, five candidate strategies (Scalp, Long, ACE, Auto, Print) independently score current market structure, and a consensus mechanism elects which one governs execution on a given bar.

Confidence in the active regime is not static. After every closed trade, the EA reinforces or decays its own regime-confidence score based on whether the outcome was aligned with strong signal confluence — including a safeguard that discounts wins which occurred without strong alignment, so the system does not mistake luck for edge. This is the mechanism referred to as “self-learning”: adaptive confidence weighting driven by realized trade outcomes, not an external machine-learning model requiring retraining or a training dataset.

What this EA is: a rules-based, structure-driven system with an internal feedback loop on confidence and strategy selection.

What this EA is not: a neural network, an LLM, or a system that discovers new signals on its own. All signal types (FVG, BOS, ADX, RSI, fractal metrics) are fixed by design; only the weighting adapts.

2. Architecture Summary

Layer	Function
Shared Signal Context	Computes H1 Fair Value Gaps, closed-bar Break-of-Structure, and swing structure (HH/HL vs LH/LL) once per bar into a composite signal-quality score read by every strategy.
Strategy Voting	Five strategies each produce a fitness score and regime probability; a consensus engine elects the active strategy.
Fractal Market Intelligence	Tracks power-law tail clustering, liquidity vacuum distance, compression/expansion phase, and an echo-recursion layer estimating directional probability from recent state vectors.
Institutional Formulas	Custom liquidity/regime metrics feeding transition-probability and pattern-coherence estimates.
Regime Filters	Session weighting, ADX trend gate, RSI-extreme block, consecutive-loss circuit breaker.
Daily Target System	Currency or percentage profit target with lockout, optional close-all, and alerting.
Position Management	Trailing stops and scale-ins across up to 20 concurrent tickets.

3. Installation

1. Copy the .mq5 file into MQL5/Experts/ in your MT5 data folder (File → Open Data Folder).

2. Restart MetaTrader 5 or refresh the Navigator panel.

3. Compile in MetaEditor (F7) and confirm zero errors.

4. Attach to the intended chart (designed for XAUUSD and BTC; other symbols require re-validation of thresholds).

5. Enable AutoTrading and confirm “Allow Algo Trading” is checked in the EA properties dialog.

6. Recommended: run on a demo account through a full weekly session cycle before committing live capital.

4. Input Parameter Reference

Core Settings

Input	Default	Description
InpLotSize	0.01	Base position size per trade, in lots.
InpTradingMode	AUTO	BUY_ONLY / SELL_ONLY / AUTO / SEQUENTIAL / PHASE — constrains or sequences trade direction.
InpStrategyType	AUTO	Forces a single strategy (Scalp/Long/ACE/Print) or leaves selection to the voting council (AUTO).
InpMaxTrades	3	Maximum concurrent open positions under this Magic Number.
InpTargetROI	15.0	Reference ROI target used in internal performance scoring.
InpEnableLogging	true	Writes detailed decision and regime-update logs to the Experts tab.
InpMagicNumber	747474	Identifier isolating this EA's trades from others on the same account.

Daily Target System

Input	Default	Description
InpEnableDailyTarget	true	Master switch for the daily profit target module.
InpTargetType	CURRENCY	Target measured in account currency or as % of daily starting balance.
InpDailyTargetAmount	100.0	Numeric target value (currency amount or percentage).

Input	Default	Description
InpStopOnTargetReached	true	Halts new trade entries once the target is hit.
InpAlertOnTargetReached	true	Sends a terminal alert when the target is reached.
InpCloseAllOnTarget	false	If true, force-closes all open positions the instant the target is reached.

AI Enhancement

Input	Default	Description
InpEnableAILearning	true	Enables the post-trade confidence reinforcement/decay loop.
InpAIInfluence	0.3	Weight (0–1) given to the adaptive confidence score in the final trade decision.

PRINT Strategy

Input	Default	Description
InpMaxPrintTradesPerDay	3	Caps trades taken via the hourly-displacement PRINT strategy.
InpPrintDisplacementThreshold	0.0025	Minimum price displacement (as a ratio) required to qualify a PRINT setup.
InpEnableScaleIns	true	Allows scaling into positions that move favorably.

Intelligence Improvements

Input	Default	Description
InpEnableSessionFilter	true	Weights signal quality higher during London/New York sessions.
InpEnableADXFilter	true	Blocks trend-following strategies when ADX is below threshold.
InpADXPeriod	14	Lookback period for the ADX calculation.
InpMinADXTrend	20.0	Minimum ADX reading required to permit trend-strategy entries.
InpBlockRSIExtremes	true	Blocks BUY entries when H1 RSI > 73 and SELL entries when H1 RSI < 27.
InpConsecLossCircuit	3	Number of consecutive losses that triggers a tightening of the entry corridor.

5. Operating Notes

- **Symbols validated:** XAUUSD and BTC. Displacement thresholds and ATR-based sizing were tuned against these instruments' volatility profile; other symbols should be forward-tested before use.
- **Regime confidence is path-dependent.** Because confidence decays or reinforces from realized outcomes, performance in the first stretch of trades after attachment will differ from steady-state behavior. Allow a warm-up period.
- **Daily Target lockout is a hard stop**, not a suggestion — once triggered with InpStopOnTargetReached = true, no new entries occur until the next trading day resets the counter.
- **Logging** (InpEnableLogging) is verbose by design; disable for production runs where log I/O could introduce latency on fast timeframes.
- Every recommendation above is a default; none of these values are guaranteed to be optimal for a given account size, broker execution model, or spread environment.

6. Financial Disclaimer

This Expert Advisor is provided strictly on an **“as-is”** basis for educational and research purposes. Trading foreign exchange, cryptocurrency, and other leveraged instruments carries a substantial risk of loss and is not suitable for all investors. Past behavior of any algorithmic strategy, including internal confidence scoring or adaptive weighting, is not indicative of future results.

By using this software, you acknowledge and agree that **Empire Trading Systems and the author accept no responsibility or liability whatsoever for any financial loss, mental or emotional distress, physical harm, or any other damage of any kind** arising directly or indirectly from the use, misuse, or malfunction of this software, including but not limited to losses caused by broker execution issues, connectivity failure, incorrect parameter configuration, or market conditions outside the system's tested scope.

Use of this software is entirely at your own risk. No warranty, express or implied, is made regarding profitability, accuracy, or fitness for a particular purpose. It is strongly recommended that any use on a live trading account be preceded by thorough demo and forward testing, and that position sizing reflect only capital you can afford to lose.
